(a) Matched edits of one held-out photo
Source
Valid sham
Fault
Vacancy only
one pin per cell
pin moved within its own cell (valid)
same move into the occupied neighbour
pin removed: the vacancy alone
Same cutout, background fill and displacement in every arm. The vacated and recipient cells (cyan) are the two compartments an inspector must check.
(b) After an alert: which compartments are queued?
Class-wide target
every pin of the class is marked anomalous
fine-tune
score map on the fault
$g \geq t_c$
inspection queue
2 targets + 11 untouched cells
long queue at 95% recall
Footprint target
only the pasted pin is marked anomalous
fine-tune
score map on the fault
$g \geq t_c$
inspection queue
2 targets + 0 untouched cells
short queue at 95% recall
target cell
queued untouched
